

Area and Perimeter of Polygons

| | | |
|-------------------------|---|--|
| Perimeter | The total distance around the outside of a shape. Units include: <i>mm, cm, m</i> etc. | <div> <div>8 cm</div> <div>5 cm</div>  $P = 8 + 5 + 8 + 5 = 26cm$ </div> |
| Area | The amount of space inside a shape. Units include: <i>mm², cm², m²</i> | <div>  </div> |
| Area of a Rectangle | Length x Width | <div> <div>9 cm</div> <div>4 cm</div>  $A = 36cm^2$ </div> |
| Area of a Parallelogram | Base x Perpendicular Height Not the slant height. | <div> <div>4cm</div> <div>3cm</div> <div>7cm</div>  $A = 21cm^2$ </div> |
| Area of a Triangle | Base x Height ÷ 2 | <div> <div>9</div> <div>4</div> <div>5</div> <div>12</div>  $A = 24cm^2$ </div> |
| Area of a Kite | Split in to two triangles and use the method above. | <div>  <div>2.2m</div> <div>8m</div> $A = 8.8m^2$ </div> |
| Area of a Trapezium | $\frac{(a + b)}{2} \times h$ "Half the sum of the parallel side, times the height between them. That is how you calculate the area of a trapezium" | <div> <div>6 cm</div> <div>5 cm</div> <div>16 cm</div>  $A = 55cm^2$ </div> |
| Compound Shape | A shape made up of a combination of other known shapes put together. | <div>  </div> |

Circles

| | | |
|--|--|--|
| Parts of a Circle | <p>Radius – the distance from the centre of a circle to the edge</p> <p>Diameter – the total distance across the width of a circle through the centre.</p> <p>Circumference – the total distance around the outside of a circle</p> <p>Chord – a straight line whose end points lie on a circle</p> <p>Tangent – a straight line which touches a circle at exactly one point</p> <p>Arc – a part of the circumference of a circle</p> <p>Sector – the region of a circle enclosed by two radii and their intercepted arc</p> <p>Segment – the region bounded by a chord and the arc created by the chord</p> | |
| <p style="text-align: center;">Parts of a Circle</p> <div><div><p>Radius</p></div><div><p>Diameter</p></div><div><p>Circumference</p></div><div><p>Chord</p></div><div><p>Arc</p></div><div><p>Tangent</p></div><div><p>Segment</p></div><div><p>Sector</p></div></div> | | |
| Area of a Circle | $A = \pi r^2$ which means ‘pi x radius squared’. | If the radius was 5cm, then: $A = \pi \times 5^2 = 78.5cm^2$ |
| Circumference of a Circle | $C = \pi d$ which means ‘pi x diameter’ | If the radius was 5cm, then: $C = \pi \times 10 = 31.4cm$ |
| π (‘pi’) | Pi is the circumference of a circle divided by the diameter. $\pi \approx 3.14$ |  |
| Arc Length of a Sector | The arc length is part of the circumference. Take the angle given as a fraction over 360° and multiply by the circumference . | Arc Length = $\frac{115}{360} \times \pi \times 8 = 8.03cm$  |
| Area of a Sector | The area of a sector is part of the total area. Take the angle given as a fraction over 360° and multiply by the area . | Area = $\frac{115}{360} \times \pi \times 4^2 = 16.1cm^2$  |

Volume and Surface Area

| | | |
|----------------------------|--|---|
| Volume | Volume is a measure of the amount of space inside a solid shape. Units: <i>mm³, cm³, m³</i> etc. |  |
| Volume of a Cube/Cuboid | $V = \text{Length} \times \text{Width} \times \text{Height}$ $V = L \times W \times H$ You can also use the Volume of a Prism formula for a cube/cuboid. | <div> <div>6cm</div> <div>3 cm</div> <div>5cm</div>  $\text{volume} = 6 \times 5 \times 3 = 90 \text{ cm}^3$ </div> |
| Prism | A prism is a 3D shape whose cross section is the same throughout. | <div>  </div> |
| Cross Section | The cross section is the shape that continues all the way through the prism. |  |
| Volume of a Prism | $V = \text{Area of Cross Section} \times \text{Length}$ $V = A \times L$ |  |
| Volume of a Cylinder | $V = \pi r^2 h$ | <div> <div>5cm</div> <div>2cm</div>  $V = \pi(4)(5) = 62.8cm^3$ </div> |
| Surface Area of a Cylinder | Curved Surface Area = πdh or $2\pi rh$ Total SA = $2\pi r^2 + \pi dh$ or $2\pi r^2 + 2\pi rh$ | <div> <div>5</div> <div>2</div>  $\text{Total SA} = 2\pi(2)^2 + \pi(4)(5) = 28\pi$ </div> |
