

## Constructions

<p>Angle Bisector</p> 	<p><b>Angle Bisector: Cuts the angle in half.</b></p> <ol style="list-style-type: none"> <li>1. Place the sharp end of a pair of compasses on the vertex.</li> <li>2. Draw an arc, marking a point on each line.</li> <li>3. Without changing the compass put the compass on each point and mark a centre point where two arcs cross over.</li> <li>4. Use a ruler to draw a line through the vertex and centre point.</li> </ol>
<p>Perpendicular Bisector</p> 	<p><b>Perpendicular Bisector: Cuts a line in half and at right angles.</b></p> <ol style="list-style-type: none"> <li>1. Put the sharp point of a pair of compasses on A.</li> <li>2. Open the compass over half way on the line.</li> <li>3. Draw an arc above and below the line.</li> <li>4. Without changing the compass, repeat from point B.</li> <li>5. Draw a straight line through the two intersecting arcs.</li> </ol>
<p>Perpendicular from an External Point</p> 	<p>The <b>perpendicular distance</b> from a point to a line is the <b>shortest distance</b> to that line.</p> <ol style="list-style-type: none"> <li>1. Put the sharp point of a pair of compasses on the point.</li> <li>2. Draw an arc that crosses the line twice.</li> <li>3. Place the sharp point of the compass on one of these points, open over half way and draw an arc above and below the line.</li> <li>4. Repeat from the other point on the line.</li> <li>5. Draw a straight line through the two intersecting arcs.</li> </ol>
<p>Perpendicular from a Point on a Line</p> 	<p>Given line PQ and point R on the line:</p> <ol style="list-style-type: none"> <li>1. Put the sharp point of a pair of compasses on point R.</li> <li>2. Draw two arcs either side of the point of equal width (giving points S and T)</li> <li>3. Place the compass on point S, open over halfway and draw an arc above the line.</li> <li>4. Repeat from the other arc on the line (point T).</li> <li>5. Draw a straight line from the intersecting arcs to the original point on the line.</li> </ol>

<p>Loci and Regions</p>	<p>A <b>locus</b> is a <b>path of points that follow a rule</b>.</p> <p>For the locus of points <b>closer to B than A</b>, create a <b>perpendicular bisector</b> between A and B and shade the side closer to B.</p> <p>For the locus of points <b>equidistant from A</b>, use a compass to draw a <b>circle</b>, centre A.</p> <p>For the locus of points <b>equidistant to line X and line Y</b>, create an <b>angle bisector</b>.</p> <p>For the locus of points a set <b>distance from a line</b>, create <b>two semi-circles</b> at either end joined by <b>two parallel lines</b>.</p>	 <p>Points Closer to B than A.</p>  <p>Points less than 2cm from A</p>  <p>Points more than 2cm from A</p>  
<p>Equidistant</p>	<p>A point is equidistant from a set of objects if the <b>distances between that point and each of the objects is the same</b>.</p>

## Similarity and Congruency

Similarity and Congruency		
Congruent Shapes	<p>Shapes are congruent if they are <b>identical - same shape and same size</b>.</p> <p>Shapes can be rotated or reflected but still be congruent.</p>	
Similar Shapes	<p>Shapes are similar if they are the <b>same shape but different sizes</b>.</p> <p>The proportion of the matching sides must be the same, meaning the ratios of corresponding sides are all equal.</p>	
Scale Factor	<p>The <b>ratio of corresponding sides</b> of two similar shapes.</p> <p>To find a scale factor, <b>divide a length</b> on one shape <b>by the corresponding length</b> on a similar shape.</p>	 <p>Scale Factor = <math>15 \div 10 = 1.5</math></p>
